The nucleic acid molecules comprising the CC polymorphic sequences contained in CYP4501A1, CYP94501A2, CYP4502E1, CC ARNT, EBHXZ, GST12, NNMT, NQO2, NRII2, STM, UGT2B4, UGT2B7, UGT2B155, AHR, CC MDR1 and/or MDR3 are useful for screening individuals for altered drug metabolism. The polymorphic sequences contained in CYP4501A1, CYP94501A2, CC metabolism. The polymorphic sequences in CYP4501A1, CYP94501A2, CC susceptibility to cancer. Polymorphic sequences in ADRB1 or CHWR2 are CC used to screen for altered cardiovascular function, in COX2 for altered central content to screen function, in FIAP and HNMT for altered central content function, in FIAP and HNMT for altered serine CC immunological or haematological function, in CHMR3, CHMR4 or CHMR5 for altered central and corriberal nervous system function. The present sequence represents a PCR content of t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S

The invention describes a method of determining presence or absence of a desired nucleic acid (NA) that contains multiple repeats of a predetermined NA target sequence in a NA sample. The method involves providing a treated sample that may contain the desired NA in which several predetermined repeating NA target sequences are hybridised with a NA probe, analysing for presence of hybridised NA containing the NA probe, and thereby the presence or absence of the desired NA. The method probe, and thereby the presence or absence of the desired NA.

Determining presence or absence of desired nucleic acids that contain multiple repeats of predetermined nucleic acid target sequences in a sample, by using nucleic acid hybridization methods.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           is useful for determining the presence or absence of desired nucleic acids that contain multiple repeats of a predetermined NA target sequence, in a NA sample obtained from a biological sample, where the repeated sequence includes several predetermined repeated sequence that differ in length and/or sequence. The methods can be efficiently used for distinguishing human and bacterial NA. The method is highly sensitive, and enables detection and quantification of the presence of a NA without the need to undergo a NA target sequence enrichment step prior to a NA hybrid detection step. The method enables rapid and accurate detection of a desired NA that contains multiple repeats of a NA target sequence. This
desired nucleic acid (NA) that contains multiple repeats of a predetermined NA target sequence in a NA sample. The method involves providing a treated sample that may contain the desired NA in which several predetermined repeating NA target sequences are hybridised with a NA probe, analysing for presence of hybridised NA containing the NA probe, and thereby the presence or absence of the desired NA. The method is useful for determining the presence or absence of desired nucleic acids that contain multiple repeats of a predetermined NA target sequence, in a NA sample obtained from a biological sample, where the repeated sequence includes several predetermined repeated sequence that differ in length and/or sequence. The methods can be efficiently used for distinguishing human and bacterial NA. The method is highly sensitive,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Repeated nucleic acid detection; human; alu; probe; ss
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Repeated nucleic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ACA62878
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 16
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       sequence represents a probe used to detect the human Alu repeat sequences

        The invention describes a method of determining presence or absence of a CC desired nucleic acid (NA) that contains multiple repeats of a CC desired nucleic acid (NA) that contains multiple repeats of a CC predetermined NA target sequence in a NA sample. The method involves CC providing a treated sample that may contain the desired NA in which a several predetermined repeating NA target sequences are hybridised with a CC NA probe, analysing for presence of hybridised NA containing the NA CC is useful for determining the presence of the desired NA. The method cis useful for determining the presence or absence of the desired nucleic CC acids that contain multiple repeats of a predetermined NA target CC sequence, in a NA sample obtained from a biological sample, where the CC distinguishing human and bacterial NA. The method is ample, where that differ in length and/or sequence. The method is highly sensitive, CC and enables detection and quantification of the presence of a NA without the need to undergo a NA target sequence enrichment step prior to a NA contains multiple repeats of a NA target sequence. This desired NA that contains multiple repeats of a NA target sequence. This

                                                                                                                         CC desired nucleic acid (NA) that contains multiple repeats of a CC predetermined NA target sequence in a NA sample. The method involves CC providing a treated sample that may contain the desired NA in which CC several predetermined repeating NA target sequences are hybridised with a CC NA probe, analysing for presence of hybridised NA containing the NA CC probe, and thereby the presence or absence of the desired NA. The method CC is useful for determining the presence or absence of desired nucleic coids that contain multiple repeats of a predetermined NA target coids that contain multiple repeats of a predetermined NA target coids that contain multiple repeats of a predetermined the NA corporated sequence, in a NA sample obtained from a biological sample, where the CC differ in length and/or sequence. The methods can be efficiently used for CC distinguishing human and bacterial NA. The method is highly sensitive, and enables detection and quantification of the presence of a NA without the need to undergo a NA target sequence enrichment step prior to a NA CC hybrid detection step. The method enables rapid and accurate detection of the presence of a NA without contains multiple repeats of a NA target sequence. This sequence represents a probe used to detect the human Alu repeat sequences. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SO

                                                                                                                                            The invention describes a method of determining presence or absence of a CC desired nucleic acid (NA) that contains multiple repeats of a CC providing a treated sample that may contain the desired NA in which CC providing a treated sample that may contain the desired NA in which CC NA probe, analysing for presence of hybridised NA containing the NA The method CC probe, and thereby the presence of hybridised NA containing the MA. The method CC is useful for determining the presence or absence of the desired NA. The method CC cacids that contain multiple repeats of a predetermined NA target CC sequence, in a NA sample obtained from a biological sample, where the CC distinguishing human and bacterial NA. The method is almple, where the CC distinguishing human and bacterial NA. The method is highly sensitive, CC and enables detection and quantification of the presence of a NA without CC the need to undergo a NA target sequence enrichment step prior to a NA (CC the need to undergo a NA target sequence enrichment step prior to a NA contains multiple repeats of a NA target sequence. This capture enrichment step prior to a NA contains multiple repeats of a NA target sequence. This

                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence 16 BP; 3 A; 6 C; 3 G; 4 T; 0 U; 0 Other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention discloses a method for generating five prime biased tandem tag libraries of cDNAs. The step involves isolating a sample of mRNAs, amplifying the released tags, concatenating the amplified tags to form concatenated tags, amplifying and isolating the concatenated tags.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Samal B,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention discloses a method for generating five prime blased trandem tag libraries of CDNAs. The step involves isolating a sample of mRNAs, amplifying the released tags, concatenating the amplified tags to form concatenated tags, amplifying and isolating the concatenated tags. The present sequence is human tandem tag DNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAD63086 standard;
                                                                                                                                                                                                                                                            The present invention discloses a method for generating five prime betandem tag libraries of cDNAs. The step involves isolating a sample mRNAs, amplifying the released tags, concatenating the amplified tag form concatenated tags, amplifying and isolating the concatenated tag The present sequence is human tandem tag DNA
                                                                                                                                                                                                                                                                                                                                                                                                                          Samal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                06-MAR-2002; 2002US-00092885

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes enzymatic nucleic acid molecules with RNA CC cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 CC gene, an integrin alpha 6 subunit gene, or a Tie-2 gene AAA16775 to CAAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17560 and AAA17623 to AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to CAAA19144 represent ribozyme sequences for Tie-2, and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA19087 to CC AAA19154 represent ribozyme sequences for Tie-2, and AAA19080 and CC AAA19223 to AAA21361 and AAA21501 to AAA21355 represent ribozyme sequences; CC AAA19223 to AAA21688 represent their corresponding target sequences; CC AAA21689 to AAA21688 represent their corresponding target sequences; CC AAA21689 to AAA22169 and AAA23263 to AAA2342 represent ribozymes of CC AAA21689 to AAA22169 and AAA23263 to AAA2342 represent ribozymes of the invention are used for modulating target sequences. The ribozymes of the invention are used for modulating the synthesis, expression and/or CC AAA21691 subunit beta-3, integrin subunit alpha-6, or Tie-2. They are ce specially used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARMD), inflammation, baoriasis, verruca vulgaris, conversional subunit alpha-6, or Tie-2. They are conversionally alpha-6, or Tie-2. They are conversionally alpha-6, or Tie-2. They are conversionally and the syndrome, co
                                                                                                                                                                                                                                                              RESULT 1656
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARMD; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; are related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiotibroma; tuberous sclerosis; pot wine stain; Sturge Weber syndrome; Kippel-Trenaunay-Weber syndrome; Osler-Weber-Rendu syndrome; ss.

```
Cc cleaving activity, which specifically cleave RNA encoded by an aryl comparison nuclear transporter (ARNT) gene, an integrin subunit beta 3 cc pene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17561 to AAA17622 represent ribozyme sequences for AAA17168 to AAA17681 to AAA17622 represent ribozyme sequences for Tie-2, and AAA19887 to Cc and AAA1758 to AAA17680 and AAA17685 to AAA17888 represent their cc carresponding target sequences; AAA17685 to AAA18385 and AAA19086 to AAA19222 represent their corresponding target sequences; AAA17685 to AAA18385 to AAA19086 cc AAA19155 to AAA19222 represent their corresponding target sequences; AAA19223 to AAA21361 and AAA21501 to AAA21595 to AAA21500 and AAA19223 to AAA21688 represent their corresponding target sequences; AAA21596 to AAA21688 represent their corresponding target sequences; Cc AAA21596 to AAA21688 represent their corresponding target sequences; Cc AAA21699 to AAA21688 represent their corresponding target sequences; Cc AAA21699 to AAA22475 and AAA22363 to AAA23343 to AAA23422 represent their corresponding target sequences; Cc AAA21689 to AAA22475 and AAA223476 to AAA23343 to Cc AAA23422 represent their corresponding target sequences; Cc AAA21899 to AAA22475 and AAA223476 to AAA23343 to Cc AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA23422 represent their corresponding target sequences. The ribozymes of Cc C AAA2342 represent their corresponding target sequences. The ribozymes of Cc C AAA2342 represent their corresponding target sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARND; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma;

(first entry)

Integrin subunit beta 3 substrate sequence

aryl

hydrocarbon nuclear transport;

ARNT; TIE-2; SEQ ID NO:5962.

angiogenesis, pin ribozyme;

integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipooriatic, ARMD; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ঠ
                                                                                       The present invention describes enzymatic nucleic acid molecules with RNA CC cleaving activity, which specifically cleave RNA encoded by an aryl CC hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 CC gene, an integrin alpha 6 subunit gene, or a fie-2 gene AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, CC and AAA17168 to AAA17563 and AAA17684 represent their CC corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 CC and AAA19155 to AAA12222 represent their corresponding target sequences; CC AAA19223 to AAA20361 and AAA21501 to AAA21595 represent ribozyme and AAA21592 represent ribozyme for integrin alpha 6 subunit, and AAA20362 to AAA21500 and AAA21596 to AAA21688 represent their corresponding target sequences; CC AAA19223 to AAA21688 represent their corresponding target sequences for integrin subunit beta 3, and AAA22476 to AAA23343 to CC aAA23422 represent their corresponding target sequences. The ribozymes of CC the invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ARNT, CC especially used to treat cancer, diabetic retinopathy, age related CC macular degeneration (ARND), inflammation, and arthritis, as well as magiofibroms. The present invention describes enzymatic nucleic acid molecules with RNA CC cleaving activity, which specifically cleave RNA encoded by an aryl chydrocarbon nuclear transporter (ARNT) gene, an integrin submit beta 3 cc gene, an integrin alpha 6 submit gene, or a Tie-2 gene. AAA16775 to AAA17167 and AAA17561 to AAA17622 represent ribozyme sequences for ARNT, cc and AAA17168 to AAA17563 and AAA17623 to AAA1684 represent their cc corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19154 represent ribozyme sequences for Tie-2, and AAA18386 to AAA19086 cc and AAA19155 to AAA19222 represent their corresponding target sequences; AAA17623 to AAA21635 to AAA22361 and AAA21501 to AAA21595 represent ribozyme sequences; CC AAA19223 to AAA21688 represent their corresponding target sequences; CC AAA19223 to AAA2248 and AAA21501 to AAA22352 represent ribozyme sequences; CC AAA21896 to AAA22475 and AAA23363 to AAA23342 represent ribozyme sequence for integrin subunit beta 3, and AAA23476 to AAA23362, AAA23343 to AAA22475 and AAA23422 represent ribozymes of the invention are used for modulating target sequences. The ribozymes of stability of an mRNA encoding angiogenic factor, especially ARNT, contegrin subunit beta-3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, diabetic retinopathy, age related comacular degeneration (ARND), inflammation, and arthritis, as well as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                                                                                                                                                                                                                  The present invention relates to detecting a genetic predisposition in a human subject for non-responsiveness to statin drug treatment, involving amplifying nucleic acids including a non-coding or untranslated region within the 3' end of the human lipoprotein lipase (LPL) gene from a tissue sample. The method is useful for determining which patients suffering from coronary artery disease, or which coronary artery bypass graft (CABG) patients, will likely not respond positively to statin drug treatment with respect to stenosis of a coronary artery or bypass graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               angiofibroma of tuberous sclerosis, pot-wine stains, Sturge was syndrome, Kippel-Trenaunay-Weber syndrome, Osler-Weber-Rendu and other syndromes and diseases related to the levels of AR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a novel isolated 17 mer nucleic acid sequence, CC given in the specification, a sequence containing at least 15 consecutive cc nucleotides from the 17 mer sequence, a sequence with, after optimal CC alignment, at least 80 % identity to the 17 mer sequence that hybridizes to them under highly stringent conditions, or the complement CC or any of them, or the corresponding RNA. The novel isolated nucleic acids of the invention are useful as probes and primers for detecting, CC identifying, quantifying and/or amplifying a nucleic acid, e.g. as one CC component of a gene chip, in vitro as (anti)seense reagents, and for CC production of recombinant polypeptides. Any of the nucleic acids, colypeptides, vectors containing the nucleic acids, cells containing the vector or antibodies directed against the polypeptides are useful for CC preparation of pharmaceuticals for prevention and/or treatment of viral CC diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and CC diseases. The polypeptides can also be used to generate antibodies, and chips. The nucleic acid sequences of the invention can be used in gene CC diseases. The polypeptides can also be used to generate antibodies, and CC chips. The nucleic acid sequences of the invention can be used in gene CC related human fukutin oligonucleotide of the invention can be used in gene

                                                                                                                                   밁
                                                                                                                                                                                     Ś
                                                                                                                                                                                                                                                                                                                                                 The invention relates to a novel isolated 17 mer nucleic acid sequence, CC given in the specification, a sequence containing at least 15 consecutive nucleotides from the 17 mer sequence, a sequence with, after optimal CC alignment, at least 80 % identity to the 17 mer sequence with, after optimal CC hybridizes to them under highly stringent conditions, or the complement CC acids of the invention are useful as probes and primers for detecting, CC identifying, quantifying and/or amplifying a nucleic acid, e.g. as one C component of a gene chip, in vitro as (anti)sense reagents, and for production of recombinant polypeptides. Any of the nucleic acids, CC polypeptides, vectors containing the nucleic acids, cells containing the vector or antibodies directed against the polypeptides are useful for CC preparation of pharmaceuticals for prevention and/or treatment of viral CC diseases that are characterised by development of tumours or cell CC diseases that are characterised by development of tumours or cell CC degeneration, specifically cancer but also Alzheimer's disease and CC schizophrenia. Analysis of the expression of the 17 mer nucleic acids in patient samples is useful for diagnosis and/or prognosis of these CC diseases. The polypeptides can also be used to generate antibodies, and chips. The nucleic acid sequences of the invention can be used in gene characterised by acid sequences of the sequence can be used in gene can

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to novel human zinc finger-containing CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, CC encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, CC or in manufacturing a medicament for treating or preventing a disorder caspociated with decreased or increased expression or activity of MDZ3, CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic caids and proteins are also useful for diagnosing or monitoring a disease CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic caids can also be used as probes to detect and characterize gross calterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are cuseful in constructing microarrays for measuring gene expression. The CC vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ4, MDZ7 or MDZ12, e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         02-AUG-2001; 2001US-00922181

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         0
```

```
New zinc finger-containing proteins and nucleic acids, useful in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3,
or MDZ12, e.g. cancer.
```

Example 8; SEQ ID NO 5429; 103pp; English.

The present invention relates to novel human zinc finger-containing compositions and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, CMDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 16p21.2 and MDZ12 sequences are useful in therapy, 16p2 associated with decreased or increased expression or activity of MDZ3, 16p2 associated with decreased or increased expression or activity of MDZ3, 16p2 acids and proteins are also useful for diagnosing or monitoring a disease 16p2 acids can also be used as probes to detect and characterize gross 16p2 and 16p2 and 16p2 associated with 16p2 associated with 16p2 associated with 16p2 associated with 16p2 and 16p2 and

Sequence 17 BP; 5 A; 1 C; 4 G; 7 T; 0 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            RESULT 1668
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC The present invention relates to novel human zinc finger-containing CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is cc encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, CC MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 16p21.2 is encoded at chromosome 16p21.2 and MDZ12 is encoded at chromosome 16p24.1.1 The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, CC or in manufacturing a medicament for treating or preventing a disorder CC associated with decreased or increased expression or activity of MDZ3, CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic CC acids and proteins are also useful for diagnosing or monitoring a disease CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic CC acids can also be used as probes to detect and characterize gross CC alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are CC useful in constructing microarrays for measuring gene expression. The CC proteins are useful as therapeutic agents for gene therapy or as CC vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

The present invention relates to nover the MDZ1, MDZ1, MDZ1. MDZ3 is proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7g22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 15g26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ3, and MDZ12 sequences associated with decreased or increased expression or activity of MDZ3, mDZ3, as a cancer or developmental disorders.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  acids and proteins are also useful for diagnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 genetic locus. The probes are useful in constructing microarrays for measuring gene expression. The proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the invention.

proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7g22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, MDZ7 is encoded at chromosome 1pp11.2 and MDZ12 is encoded at chromosome 1pp11.2 and MDZ12 is encoded at chromosome 1pp11.2 and MDZ12 is encoded at chromosome 15g26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, or in manufacturing a medicament for treating or preventing a disorder associated with decreased or increased expression or activity of MDZ3, MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic acids and proteins are also useful for dispnosing or monitoring a disease caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic acids can also be used as probes to detect and characterize gross alterations in MDZ3, MDZ4, MDZ7, or MDZ12 gross are material microscopic acids and protein acids on MDZ3, MDZ4, MDZ7, or MDZ12 gross are useful in constructing microarrays for measuring gene expression. proteins are useful as therapeutic agents for gene therapy or as vaccines. The present sequence was used to illustrate the inventic The present invention relates to novel human zinc finger-containing

New zinc finger-containing proteins and nucleic acids, useful manufacturing a medicament for treating or preventing a disorcassociated with decreased or increased expression or activity MDZ4, MDZ7 or MDZ12, e.g. cancer.

useful in disorder

of.

MDZ3,

                                                                                                                                                                                                         CC The present invention relates to novel human zinc finger-containing CC proteins and their coding sequences: MDZ3, MDZ4, MDZ7, MDZ12. MDZ3 is encoded at chromosome 7q22.1, MDZ4 is encoded at chromosome 6p21.3-22.2, CC MDZ7 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome 16p11.2 and MDZ12 is encoded at chromosome CC 15q26.1. The MDZ3, MDZ4, MDZ7, and MDZ12 sequences are useful in therapy, CC or in manufacturing a medicament for treating or preventing a disorder CC associated with decreased or increased expression or activity of MDZ3, CC MDZ4, MDZ7, or MDZ12, e.g. cancer or developmental disorders. The nucleic CC acids and proteins are also useful for diagnosing or monitoring a disease CC caused by altered expression of MDZ3, MDZ4, MDZ7, or MDZ12. The nucleic CC acids can also be used as probes to detect and characterize gross CC elseful in constructing microarrays for measuring gene expression. The CC proteins are useful as therapeutic agents for gene therapy or as CC vaccines. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Best Loc

                                                                                                                                                                                                                                                                                               The invention relates to a novel short interfering RNA (siRNA) nucleic acid molecule or an enzymatic nucleic acid molecule, that modulates expression of a nucleic acid molecule encoding HER2, K-Ras, H-Ras, N-Ras, human immunodeficiency virus (HIV) or a component of HIV. The nucleic acid molecule of the invention has cytostatic, anti-HIV, and anti-rheumatic activity. The nucleic acid molecules are useful for reducing HER2, K-Ras, H-Ras, and HIV activity in a cell. The nucleic acids are also useful for treating breast, ovarian, colorectal, lung, prostate, bladder, or pancreatic cancer, and HIV infection, and AIDS. The sequences shown in ABZ59889 - ABZ62216, ABZ64544 - ABZ65531, ABZ66520 - ABZ66524, ABZ66530 - ABZ66530 - ABZ66537 represent substrate/target sequences for the human riborates.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       pri jo
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel short interfering RNA and enzymatic nucleic acid useful for treating cancer, modulates the expression of a nucleic acid encoding HER2, K-Ras, H-Ras, N-Ras, and human deficiency virus sequences.

The oligonucleotides are useful as (1) as probes and primers for detecting, identifying, quantifying and/or amplifying nucleic acid, e.g. as one component of a gene chip, in vitro as (anti)sense reagents, and (2) for production of recombinant polypeptides. The oligonucleotides are useful for preparation of pharmaceuticals for prevention and/or treatment of viral diseases that are characterised by development of tumours or cell degeneration, specifically cancer but also Alzheimer's disease and schizophrenia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid, useful for treating viral diseases associated with tumors and cell degeneration, also related polypeptides, antibodies and transfected cells.

suppression or reversion, apoptosis and or viral resistance, to produce recombinant polypeptides, and to prepare transgenic animals, as experimental models. The nucleotides (also vectors containing them and cells containing the vectors), the encoded polypeptides and antibodies (Ab) against the polypeptide are useful for prevention and/or treatment of viral infections or diseases characterized by development of tumours or cell degeneration (e.g. Alzheimer's disease or schizophrenia).

Analysis of the expression of the nucleotides can be used for diagnosis and/or prognosis of these diseases. The nucleotides and polypeptides can also be used to screen for their specific interactive molecules, potentially useful for treating diseases associated with abnormal expression of the nucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                          fragments of at least 15 consecutive nucleotides of these nucleotides, a sequence having at least 80% identity, after optimal alignment, with the nucleotides, a sequence that hybridizes under atticker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid encoding human prostate membrane-specific antigen, useful e.g. for treatment of tumors and viral infection, also related polypeptide and antibodies.
                                                                                                                                                                                                                                                                                                                      nucleotides, a sequence that hybridizes under stringent conditions with the nucleotides, or the complement, or corresponding RNA, of the nucleotides. The nucleotides are used as probes or primers for detecting, identifying, quantifying and/or amplifying nucleic acids, as in vitro sense and antisense sequences, of nucleotides involved in tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Telerman

The invention is used to diagnose or treat viral disease or disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents an isolated nucleic acid sequence associated with tumour suppression or regression, apoptosis or virus resistance. invention relates to these sequences or sequences having at least 80% identity to them, and polypeptides encoded by the sequences or
               invention relates to these sequences or sequences having at least a identity to them, and polypeptides encoded by the sequences or polypeptides having 80% identity to the polypeptide sequences. The invention is used to diagnose or treat viral disease or disease characterized by development of tumour cells or cellular degeneration.

                            that down regulate the expression or inhibit the function of a receptor (CC for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR), CC largest kinase (IKK), or protein kinase PKR. The nucleic acids of the CC invention are useful for treating: cerebrovascular accident, central concrous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, CC testenosis or asthma), Crohn's disease (e.g. rheumatoid arthritis, CC ischaemia/reperfusion injury, glomerulonephritis, spesis, and allergic conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The CC nucleic acids of the invention are also useful for down-regulating the CC creates and mutations within diseased cells or to detect the presence of a target RNA in a cell. The present RNA sequence represents a human PKR CC invention and as a diagnostic tool to examine genetic conditions (e.g. actima and allergic rhinitis or actions of a target gene and as a diagnostic tool to examine genetic conditions of a target gene and as a diagnostic tool to examine genetic conditions (e.g. actima within diseased cells or to detect the presence of a charget RNA in a cell. The present RNA sequence represents a human PKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  protein kinase PKR; cerebrovascular accident; central nervous system injury; CNS injury; spinal cord injury; cance; melanoma; lymphoma; glioma; inflammatory disease; rheumatoid arthrit; restenosis; asthma; Crohn's disease; diabetes; obesity; autoimmune disease; fupus; multiple sclerosis; transplant rejection; graft rejection; ischaemia; reperfusion; glomerulonephritis; sepsis; allergy; asthma; allergic rhinitis; atopic dermatitis; human PKR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 17
                                                                                                                                                                                                                                                                                                                                                                                Novel enzymatic nucleic acid that down-regulates expression of neurite growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or protein kinase PKR genes, for treating cancer and inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            05-APR-2001; 2001US-00827395

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                    The invention comprises nucleic acids (e.g. antisense oligonucleotides)
C that down regulate the expression or inhibit the function of a receptor for a neurite growth inhibitor, NGGO, prostaglandin D2 receptor (PTGDR),
C IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the invention are useful for treating: cerebrovascular accident, central nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis, restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune disease, lupus, multiple sclerosis, transplant/graft rejection, ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The nucleic acids of the invention are also useful for down-regulating the expression of a target gene and as a diagnostic tool to examine genetic drifts and mutations within diseased cells or to detect the presence of a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                              The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor. NOGO, prostaglandin D2 receptor (PTGDR),
CC RappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC Invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC ymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lupus, multiple sclerosis, transplant/graft rejection,
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC uncleic acids of the invention are also useful for down-regulating the
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human PKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       RESULT 1679
                               The invention comprises nucleic acids (e.g. antisense oligonucleotides) CC that down regulate the expression or inhibit the function of a receptor (for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR), CC KappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the cinvention are useful for treating: cerebrovascular accident, central convention are useful for treating: cerebrovascular accident, central convention are useful for treating: cerebrovascular accident, central conventions system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, CC lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis, cordinated the convention of accident, candidating, allergic conditions or asthma), Crohn's disease, diabetes, obesity, autoimmune CC disease, lupus, multiple sclerosis, transplant/graft rejection, and allergic conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The CC cuties acids of the invention are also useful for down-regulating the CC expression of a target gene and as a diagnostic tool to examine genetic CC drifts and mutations within diseased cells or to detect the presence of a target RNA in a cell. The present RNA sequence represents a human PKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Loc

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            SS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 1681
                         The invention comprises nucleic acids (e.g. antisense oligonucleotides)
that down regulate the expression or inhibit the function of a receptor
for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR),
IkappaB kinase (IKK), or protein kinase PRR. The nucleic acids of the
invention are useful for treating: cerebrovascular accident, central
nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
disease, lupus, multiple sclerosis, transplant/graft rejection,
conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
nucleic acids of the invention are also useful for down-regulating the
compression of a target gene and as a diagnostic tool to examine genetic
drifts and mutations within diseased cells or to detect the presence of a
target RAR in a cell. The present RNA sequence represents a human PKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antisense oligonucleotide; neurite growth inhibitor; NOGO; prostaglandin D2 receptor; PTGDR; IkappaB kinase; IKK; protein kinase PKR; cerebrovascular accident; central nervous system injury; CNS injury; spinal cord injury; cancer; melanoma; lymphoma; glioma; inflammatory disease; rheumatoid arthritis; restenosis; asthma; Crohn's disease; diabetes; obesity; autoimmune disease; lupus; multiple sclerosis; transplant rejection; graft rejection; ischaemia; reperfusion; glomerulonephritis; sepsis; allergy; asthma; allergic rhinitis; atopic dermatitis; human PKR;
                                                                                                                                                                                                                                                                                                                                                                      Novel enzymatic nucleic acid that down-regulates expression of neurite growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-APR-2001; 2001US-00827395

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   문
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
                                                    The invention comprises nucleic acids (e.g. antisense oligonucleotides)
CC that down regulate the expression or inhibit the function of a receptor
CC for a neurite growth inhibitor, NOGO; prostaglandin D2 receptor (PTGDR),
CC RappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the
CC invention are useful for treating: cerebrovascular accident, central
CC nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma,
CC ymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis,
CC restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune
CC disease, lugus, multiple sclerosis, transplant/graft rejection,
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The
CC mucleic acids of the invention are also useful for down-regulating the
CC expression of a target gene and as a diagnostic tool to examine genetic
CC drifts and mutations within diseased cells or to detect the presence of a
CC target RNA in a cell. The present RNA sequence represents a human PKR
CC substrace accompany

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RESULT 1684
                                                   that down regulate the expression or inhibit the function of a receptor (for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR), C2 IkappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the invention are useful for treating: cerebrovascular accident, central carvous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, Iymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis, C2 restenosis or asthma), Crohn's disease, diabettes, obseity, autoimmune disease, lupus, multiple sclerosis, transplant/graft rejection, C3 ischaemia/reperfusion injury, glomerulonephritis, sepsis, and allergic conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The nucleic acids of the invention are also useful for down-regulating the expression of a target gene and as a diagnostic tool to examine genetic drifts and mutations within diseased cells or to detect the presence of a target RNA in a cell. The present RNA sequence represents a human PKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Best Local
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   melanoma; lymphoma; glioma; inflammatory disease; rheumatoid arthrit restences; asthma; Crohn's disease; diabetes; obesity; autoimmune disease; lupus; multiple sclerosis; transplant rejection; graft rejection; ischaemia; reperfusion; glomerulonephritis; sepsis; allergy; asthma; allergic rhinitis; atopic dermatitis; human PKR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          antisense oligonucleotide; neurite growth inhibitor; NOGO; prostaglandin D2 receptor; PTGDR; IkappaB kinase; IKK; protein kinase PKR; cerebrovascular accident; central nervous system injury; CNS injury; spinal cord injury; cancer; melanoma. lumbhom: lifetonium; spinal cord injury; cancer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel enzymatic nucleic acid that down-regulates expression of neurite growth inhibitor receptor, prostaglandin D2 receptor, IkappaB kinase or protein kinase PKR genes, for treating cancer and inflammatory disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 17 BP; 3 A; 6 C; 4 G; 0 T; 4 U; 0 Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  SS
                           The invention comprises nucleic acids (e.g. antisense oligonucleotides) that down regulate the expression or inhibit the function of a receptor (for a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDP), CI RappaB kinase (IKK), or protein kinase PKR. The nucleic acids of the cinvention are useful for treating: cerebrovascular accident, central nervous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, CI lymphoma or glioma), inflammatory disease (e.g. rheumatoid arthritis, restenosis or asthma), Crohn's disease, diabetes, obesity, autoimmune conditions or glioma, multiple sclerosis, transplant/graft rejection, conditions (e.g. asthma, allergic rhinitis or atopic dermatitis). The nucleic acids of the invention are also useful for down-regulating the expression of a target gene and as a diagnostic tool to examine genetic chiffs and mutations within diseased cells or to detect the presence of a target RNA in a cell. The present RNA sequence represents a human PKR cube conditions of the present RNA sequence represents a human PKR cube conditions of the present RNA sequence represents a human PKR cube conditions within diseased cells or to detect the presence of a carget RNA in a cell. The present RNA sequence represents a human PKR cube conditions within diseased cells or to detect the presence of a carget RNA in a cell.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Š
                                                              CC that down regulate the expression or inhibit the function of a receptor (PTGDR), cross a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR), cross a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR), cross a neurite growth inhibitor, NOGO, prostaglandin D2 receptor (PTGDR), cross a neurous system (CNS) injury, spinal cord injury, cancer (e.g. melanoma, core process, inflammatory disease (e.g. rheumatoid arthritis, crestencesis or asthma), Crohn's disease, diabetes, obseity, autoimmune disease, lupus, multiple sclerosis, transplant/graft rejection, crestencesis or asthma), Crohn's disease, diabetes, obseity, autoimmune disease, lupus, multiple sclerosis, transplant/graft rejection, crestencesis or asthma, allergic rhinitis or atopic dermatitis). The nucleic acids of the invention are also useful for down-regulating the expression of a target gene and as a diagnostic tool to examine genetic diffs and mutations within diseased cells or to detect the presence of a target RNA in a cell. The present RNA sequence represents a human PKR
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            melanoma; lymphoma; glioma; inflammatory disease; rheumatoid arthrit restanosis; asthma; Crohn's disease; diabetes; obesity; autoimmune disease; lupus; multiple sclerosis; transplant rejection; graft rejection; ischaemia; reperfusion; glomerulonephritis; sepsis; allergy; asthma; allergic rhinitis; atopic dermatitis; human PKR;
